

Environmental Policy - "Protection, Not Performance"

End Greenwashing, Start Accountability

- No more performative eco-policies. Ban meaningless "net zero" claims unless backed by provable local results-not carbon trading scams.
- Mandate full transparency on environmental impact. All companies must publish waste, energy use, emissions, and water pollution figures quarterly.

Clean Water, No Compromise

- Ban sewage dumping immediately. No exemptions. No excuses.
- Monthly, independently verified testing of all water sources-published online and in public spaces.
- End all water fluoridation and hidden chemical dosing. Bodily autonomy includes water purity.

Energy Policy That Works

- Massive nuclear buildout to guarantee clean, high-output baseload power.
- Ban all new wind/solar on farmland-protect food security first.
- Reopen select coal sites with automated injury-free tech until nuclear grid is ready.
- Nationalise critical energy infrastructure-no foreign ownership of UK power or gas.
- Scrap Smart Meters permanently.

Waste Reform

- Weekly bin collection for all councils-no more 2/3/4 week cycles.
- Ban black bag-only systems. Bins are mandatory and must be predator-safe.
- Standardise waste systems across the UK. No fines for sorting mistakes-recycling centres will sort.
- Ban overseas waste exports. If we make it, we deal with it here.

Nature & Land Use

- Ban large-scale solar/wind on farmland and moors-stop sacrificing countryside.
- Strict protection of natural reserves-no development, no loopholes.
- Subsidise hedgerow and tree planting over field fencing.
- Launch "Dig for Victory 2.0" to train communities in home-growing, composting, seed saving, and permaculture.

Atmospheric Integrity

- Ban Geoengineering Without Public Consent. No weather modification, cloud seeding, or aerosol dispersal without full public disclosure and Parliamentary approval.
- National Investigation into Aerial Spraying. Establish inquiry and release all MOD/DEFRA data.
- Prohibit atmospheric chemical testing. No aerosols, nanoparticles, or agents released in UK airspace.
- Flight Path Transparency. All commercial and government aircraft must publish chemical fuel contents and route histories.

This policy stands for nature, transparency, and clean air for all-not profit-driven illusion.
